This study was carried out at Trakya University, Engineering Faculty Department of Genetics and Bioengineering to investigate characteristics of registered Temperate rice cultivars in Turkey in 2016. Registered all temperate rice cultivars were planted plastic trays and 20 days old seedling were transplanted 50 cm between and 20 cm within rows. Observations were taken for 5 plants in each replications. Observations were taken according to UPOV characteristics. Some agronomic characteristics of registered rice cultivars in Turkey were compared and discussed.

Key words: Temperate Rice, Registered cultivars, Agronomic characteristics
